PROFESSIONAL SUMMARY:

Python Developer with 3+ years of experience in backend application development, API integrations, database management, cloud-based solutions, and enterprise software development. Experienced in building scalable web applications using Python, Django, Flask, and FastAPI. Strong knowledge of RESTful services, PostgreSQL, cloud technologies, automation, and application support. Proven ability to work closely with business users, product teams, and cross-functional stakeholders to deliver reliable software solutions in agile environments.

TECHNICAL SKILLS:

Programming Languages: Python, SQL, JavaScript, TypeScript, Java

Web Frameworks: Django, Flask, FastAPI

API Technologies: REST APIs, JSON, Postman

Databases: PostgreSQL, MySQL, Cloud SQL, Firestore

Cloud Platforms: Google Cloud Platform (GCP), Firebase

GCP Services: Cloud Storage, Cloud SQL, Pub/Sub, Cloud Functions

DevOps & Version Control: Docker, Terraform, Jenkins, Git, GitHub

Data Processing: Pandas, NumPy

Testing Tools: PyTest, Unit Testing

Development Methodologies: Agile, Scrum, SDLC

WORK EXPERIENCE:

LOTUS CLOUD, DALLAS, TX | Python Developer

Apr 2026 – Present

Project: Workforce Management & Client Operations Platform

- Worked closely with business stakeholders to understand workforce management and client engagement requirements and translate them into scalable backend solutions.
- Took ownership of backend development activities for employee onboarding, resource allocation, project tracking, and client management modules.
- Built and enhanced REST APIs using FastAPI to support day-to-day business operations across multiple departments.
- Collaborated with frontend teams to integrate business workflows and ensure smooth communication between UI and backend systems.
- Played a key role in modernizing legacy application components and improving overall system maintainability.
- Developed reusable service components that accelerated feature delivery and reduced duplicate implementation efforts.
- Worked extensively on PostgreSQL database design, schema enhancements, query tuning, and performance optimization.
- Participated in discussions with business teams to automate manual operational activities and improve workflow efficiency.
- Developed secure document management functionality allowing users to upload, manage, and retrieve business documents.
- Supported implementation of role-based access controls for employees, managers, clients, and administrators.
- Assisted in integrating Stripe payment services for subscription management and invoice processing requirements.
- Built notification and workflow tracking services to improve visibility into approval and project management processes.

- Investigated production incidents, analyzed application logs, and resolved issues impacting business operations.
- Worked with cloud engineering teams to support deployments and infrastructure automation activities on Google Cloud Platform.
- Participated in sprint planning, estimation sessions, backlog grooming, and release activities within Agile teams.
- Conducted peer code reviews and helped maintain coding standards and development best practices.
- Mentored junior developers and provided guidance on API development, database design, and debugging techniques.
- Continuously focused on application performance improvements, system stability, and operational efficiency.

Environment: Python, FastAPI, PostgreSQL, REST APIs, Firebase Authentication, GCP, Docker, Terraform, Git, Stripe API, Jira

ARIAT, SAN LEANDRO, CA | Python Developer

Jun 2024 – Mar 2026

Project: Retail Order Fulfillment & Inventory Management System

- Contributed to the development of backend applications supporting retail order processing, inventory management, and fulfillment operations.
- Worked with business teams to understand order lifecycle processes and implement system enhancements supporting daily retail operations.
- Developed RESTful APIs using Python and FastAPI for inventory updates, order validation, shipment tracking, and fulfillment workflows.
- Assisted in integrating warehouse management systems with internal retail applications through API-based communication.
- Built automation scripts to process product catalog updates and inventory feeds received from suppliers and business partners.
- Worked on inventory synchronization processes to ensure accurate stock visibility across multiple sales channels.
- Participated in database design discussions and implemented enhancements to support growing transaction volumes.
- Optimized SQL queries and improved data retrieval performance for inventory and order management modules.
- Supported development of scheduled processes responsible for inventory reconciliation and operational reporting.
- Collaborated with QA teams during testing cycles and assisted in resolving application defects before production releases.
- Participated in deployment activities and supported CI/CD processes using Jenkins and Docker.
- Monitored application logs and investigated production issues affecting order fulfillment operations.
- Worked closely with cross-functional teams to implement process improvements and operational enhancements.
- Assisted in creating technical documentation and API specifications for internal development teams.
- Contributed to Agile ceremonies including sprint planning, daily standups, retrospectives, and backlog refinement sessions.

Environment: Python, FastAPI, PostgreSQL, SQL, Pandas, NumPy, Jenkins, Docker, Git, REST APIs, Postman

LOTUS CLOUD, DALLAS, TX | Software Developer

Jan 2023 – May 2024

Project: Cloud-Based Workforce & Project Management Platform

- Supported development of a cloud-based workforce and project management platform used for employee

administration and project tracking activities.

- Worked with senior developers to build backend modules using Python and Django following established development standards.
- Participated in API development activities supporting employee onboarding, project assignments, and task management functionalities.
- Assisted in implementing business rules and workflow logic based on stakeholder requirements.
- Developed reusable utility modules that simplified common application functions and improved development productivity.
- Worked on PostgreSQL database enhancements including table design, query optimization, and data validation processes.
- Supported integration efforts involving Google Cloud services and internal business applications.
- Created automated reporting solutions that helped business users monitor project utilization and workforce activities.
- Assisted in developing scheduled jobs used for notifications, reminders, and recurring operational processes.
- Worked with QA teams to identify defects, validate fixes, and support system testing efforts.
- Participated in troubleshooting application issues and resolving production support tickets.
- Collaborated with team members during sprint activities and contributed to successful project deliveries.
- Supported Docker-based deployments across development and testing environments.
- Participated in code reviews and incorporated feedback to improve code quality and maintainability.
- Gained hands-on experience with cloud-native application development and enterprise software delivery practices.

Environment: Python, Django, Flask, PostgreSQL, REST APIs, GCP, Cloud SQL, Cloud Storage, Docker, Git

EDUCATION:

Master of Science in Computer Science | 2022 – 2024

State University of New York at Buffalo, Buffalo, NY

Bachelor of Technology in Computer Science | 2018 – 2022

Indian Institute of Technology (IIT) Bhilai, India

CERTIFICATIONS:

- Google Cloud Digital Leader
- Google Gen AI Leader
- Google Associate Cloud Engineer

ACADEMIC PROJECTS:

Chat and Query Bot with Document Retrieval

- Developed a document search and retrieval application using Python and information retrieval techniques.
- Built indexing and search functionality to improve document discovery and retrieval efficiency.
- Implemented backend services to process user queries and return relevant search results.
- Worked with structured and unstructured datasets to improve search accuracy and response quality.

Credit Card Eligibility Prediction

- Processed customer datasets using Python, Pandas, and SQL for data preparation and analysis.
- Performed exploratory data analysis to identify trends and key business indicators.
- Developed predictive models to evaluate customer eligibility based on historical data patterns.
- Created visual reports and dashboards to present analytical insights and model outcomes.
